7/21/21

[illegible]

Evening Brief

Date: July 21st, 2021

Preparedness Levels & Great Basin Fire Activity (from WFDSS)

Great Basin	PL 3	Light Initial Attack Activity
National	PL 5	New Fires and Acres: 17 fires for 2,203.2 acres / 5,744 acres Large Fire Growth

Weather Summary:

... Wetter Thunderstorms Over the Southern and Eastern Half of the Great Basin Diminishing through the Week ...

... Drier Air and Breezy Winds Returns to Western and Northern Nevada, Idaho and Wyoming Later this Week ...

High pressure will remain over the Great Basin this week with warm temperatures and smoky conditions continuing in the north and west. Smoke will be most prevalent across northwest Nevada and Idaho. Drier air moves into Western Nevada and Idaho pushing the remnants of the monsoonal moisture and isolated thunderstorms further eastward over Eastern Nevada, Eastern Idaho, Wyoming and Utah with increasingly wet storms across southern Utah and a mix of wet and dry lightning further west and north. Thunderstorms will diminish Friday into the weekend with most lightning located over the southern half of Utah, the Arizona Strip and into Southern Nevada.

Winds will pick up again along the Sierra Front Thursday and continue through the end of the week with gusts 25-30 mph and lower RH. Winds will also pick up again across Central Idaho with gusts 25-30 mph Thursday. These drier, breezy conditions will increase the likelihood of holdovers the next few days.

Over the weekend, hot and dry conditions will return in the northern and central portions of the Great Basin, with RH dropping back into the teens in Idaho and Wyoming and single digits to teens across the northern half of Nevada into Northwest Utah. Poor overnight RH recoveries are expected through the weekend over Western and Northwest Nevada with poor to moderate recoveries north into Idaho, while more humid conditions and isolated thunderstorms will linger in the far south.

Fuels/Fire Potential:

... Fuels and Fire Behavior Advisory in effect for Idaho, and Northern Portions of Both Utah and Nevada...

Fire danger indices dropped slightly in Idaho due to recent increases in RH, clouds/smoke, and thunderstorms along with spotty precipitation, but remain above the 80th percentile in most areas across the northern half of the Great Basin. However, indices will climb right back up later this week and this weekend in northern, western, and central areas with the drier air moving in. Fuels in the southern third of the Great Basin have moistened significantly in most areas, with continued moistening in the coming days. The warmer, drier, and breezy

conditions the next few days will have a good potential to stir up existing fires, as well as new holdovers across Northern portions of Nevada and Utah, into Idaho and Wyoming.

Resources:

Aviation within the Great Basin

- 0 VLAT, 3 LATs, 0 CL-415
- 25 SEATs, 2 FB, 11 AA, 1 ASM, 1 LP
- 11 Type 1 Helicopters / 11 Comm.
- 7 Type 2 Helicopters / 7 Comm.
- 20 Type 3 Helicopters / 13 Comm.

Crews Committed within the Great Basin

- 16 IHCs / 0 Available / 3 R&R
- 21 Type 2IA / 1 Available / 1 R&R
